

## CLAIMS

1-26 (Canceled).

27. (Currently amended) A body dryer comprising:

a housing having a front wall, a rear wall and a pair of side walls;

a plurality of vents positioned on the front wall of said housing;

a hot air blower assembly received within said housing for dispersing hot air through said vents, said hot blower assembly including a fan having an air output with a plurality of heaters positioned adjacent thereto;

a depressible switch ~~means~~ positioned on said housing;

a microprocessor means in communication with said switch ~~means~~ for sequentially activating a select one of said heaters each time said switch ~~means~~ is ~~actuated~~ depressed.

28. (Previously presented). The body dryer according to Claim 27 further comprising a gravity actuated safety switch electrically connected to said hot air blower assembly for disabling power thereto in the event said housing is overturned.

29. (Previously presented) The body dryer according to Claim 28 wherein said housing is pivotally mounted on a weighted support stand that uprightly supports said housing on an underlying surface.

30. (Previously presented) The body dryer according to Claim 29 wherein said housing front wall is convex so that said vents simultaneously project hot air upwardly, downwardly, and straight ahead.

31. (Previously presented) The body dryer according to Claim 30 wherein each of said vents includes a plurality of pivotal louvers operably connected to an adjustment dial, said

adjustment dial positioned on the front wall of said housing whereby said dial is rotated to pivot said louvers so as to redirect hot air.

32. (Previously presented) The body dryer according to claim 31 wherein said support stand includes a planar base portion with a pair of spaced arms extending upwardly therefrom, each of said arms terminating at a distal end;

an adjustment knob releasably securing the distal end of each of said arms to one of said housing sidewalls allowing said housing to be angularly adjusted.
